

6W solar panels in parallel

Overview

How to connect solar panels together in parallel: Join the positive (+) cables of all the panels into a single one, then do the same with all the negative (-) cables. For this, you will need branch connectors or a combiner box.

6W solar panels in parallel

<u>Victron Energy</u>, I need some advise from the <u>experts please</u>..

Troy Nugent 1 reaction \cdot 1 comment Peter Hilderson Victron Energy 6w \cdot Public Hil have an auto electrician install a 100/50 solar smart charger to replace two Projecta idc 25's to get better ...
