What is a long-duration energy storage system?

Long-duration energy storage systems (LDS) are designed to store energy for several hours or even days. These systems are typically used to provide backup power during extended grid outages or to store excess renewable energy generated during times of low demand for use during times of high

What is energy storage?

Energy storage is defined as the capture of intermittently produced energy for future use. In this way it can be made available for use 24 hours a day, and not just, for example, when the Sun is shining, and the wind is blowing. It can also protect users from potential interruptions that could threaten the energy supply.
