

# **Colombia Solar Power Home Power Generation System**

#### **Overview**

Does Colombia need more solar energy?

The results of the expert elicitation show an overall agreement regarding the need for more RES, especially solar energy, to diversify the energy mix in Colombia. According to the experts, a change could be beneficial, since Colombia could reduce its dependency on electricity generation from hydropower and fossil fuels.

Can solar power be used for residential self-sufficiency in Colombia?

Pre-feasibility of wind and solar systems for residential self-sufficiency in four urban locations of Colombia: implication of new incentives included in Law 1715 Renew. Energy, 130 (2019), pp. 1082 - 1091, 10.1016/j.renene.2018.06.087.

Are photovoltaics a viable option for Colombia?

Photovoltaics are an important element for Colombia's energy transition. For Colombian households, small-scale PV without batteries are the most profitable. Additional support is needed regarding regulatory framework & financial instruments. Interviewed experts would prefer the introduction of power purchase agreements.

Are political incentives needed for a solar energy transition in Colombia?

This results in a lack of political incentives and not enough will and public interest. 86% of the respondents mentioned that to have a successful energy transition, more political incentives are needed since solar energy is still too expensive in Colombia, caused by expensive solar equipment and a lack of skilled labor.

How much electricity does Colombia produce?

Colombia's installed electric power generation capacity currently stands at 17,771 MW, with hydro accounting for 68 percent, gas and coal-fired power

plants accounting for 31 percent, and the remaining one percent from wind and solar units. The country's energy matrix is clean but highly dependent on climatic conditions to generate hydro power.

What is Colombia's energy transition process?

Colombia's energy transition process is underway. Former President Ivan Duque set a goal to increase non-conventional renewable energy installed capacity from one percent to more than 12 percent of the energy matrix by 2022.
