

Double glass assembly single glass assembly

Overview

What is double glazing glass?

It is commonly referred to as 'double glazing glass' or 'double pane'. Double glazing or insulated glass evolved from the traditional double-hung windows and storm windows, which separated the interior and exterior spaces using a single pane of glass.

What is a double glazing unit?

A combination of two or more sheets of glass, separated by a spacer bar and sealed so that it forms a single unit, having one or more air spaces in between is called a Double-Glazed Unit. It is commonly referred to as 'double glazing glass' or 'double pane'.

Should I replace a single pane of glass in a double pane window?

Double pane windows are often the preferred choice of homeowners because they are energy efficient, improve noise reduction and make the home more comfortable overall. When one pane of these windows is damaged, homeowners often ask if they can simply replace a single pane of glass in a double pane window.

What makes a double-pane glass unit a good choice?

The integrity of a double-pane glass unit relies on its impeccable seal. If we were only to replace the damaged pane, we'd risk an imperfect seal, leading to unwanted moisture and fog. Our double and triple-pane glasses are crafted with precision at specialized facilities to ensure top-tier quality.

What is a modular glass partition wall?

This is a revolutionary modular glass partition wall design from IQUBX where a single system is designed to accommodate multiple glazing options. This glass partition system can accommodate single glass, double glass, even 3 glasses and Vacuum Insulated Glass (VIG), also called Double Glass Unit (DGU) too.

What is the R-value of a double-pane window?

The R-value of double-pane windows varies depending on the thickness of the glass and if a low emissivity or Low-E glazing is used. A simple double-pane window with 1/4-inch spacing is less energy efficient than a single-pane window and storm at an R-value of 1.69.
