

Investment cost of photovoltaic curtain wall for factory buildings

Overview

Generally, the expense of installing solar curtain walls can fluctuate significantly, averaging anywhere from \$50 to \$150 per square foot. This variance depends on aspects such as material quality, design intricacies, and location factors. What is a photovoltaic curtain wall?

A photovoltaic curtain wall has the added benefit of generating electricity over the building's life. Whilst it costs a bit more than standard curtain walling, the incremental cost of a BIPV facade will typically be paid back within around five years. The standard material for a photovoltaic facade is thin film glass (see picture below).

What are the benefits of a photovoltaic curtain wall?

It also improves the aesthetic appearance of the building. A photovoltaic curtain wall has the added benefit of generating electricity over the building's life. Whilst it costs a bit more than standard curtain walling, the incremental cost of a BIPV facade will typically be paid back within around five years.

Do photovoltaic curtain walls improve the cost-effectiveness ratio?

After sensitivity analysis of the cost of photovoltaic curtain walls and the efficiency of solar panels, it was found that as the cost increases, the economy of photovoltaic curtain walls gradually deteriorates, and improving the efficiency of solar panels can improve the cost-effectiveness ratio of each facade.

What is the service life of photovoltaic curtain walls?

The service life of photovoltaic curtain walls is 25 years. The assumptions for life cycle cost (LCC) calculation include equipment procurement costs, operation and maintenance costs, energy costs, repair and replacement costs, etc. These assumptions can be adjusted based on specific projects. The calculation formula is as follows:

What is the annual power generation of photovoltaic curtain walls?

Annual power generation of photovoltaic curtain walls on different facades of buildings. According to the characteristics of photovoltaic modules, the attenuation rate of photovoltaic modules is around 2% in the first year, and the average annual attenuation rate from the following year is around 0.6%.

How much power does a photovoltaic curtain wall generate?

Based on Table 7 and Table 8, the annual and total power generation data for the photovoltaic curtain walls on different facades can be obtained. The south facade's photovoltaic curtain wall has the highest power generation capacity, with a cumulative power generation of 17,730.42 MWh over a 25-year period.
