Romanian photovoltaic module specifications and prices

Overview

Does Romania have a solar PV project in 2023?

Overview of solar PV developments Following a period of lull, Romania has achieved in 2023 a significant milestone in its renewable energy journey – over 1 GW of new solar capacity installed in one year between distributed generation and utility scale projects.

How many largescale photovoltaic projects are there in Romania?

Here are some considerations based on this research. Romania has made significant strides in developing large-scale photovoltaic (PV) projects, contributing to its renewable energy goals. As of the latest data available, there are over 880 large-scale PV projects in Romania, boasting a cumulative capacity of approximately 46,600 MW.

What are the different solar energy schemes in Romania?

Some of the most notable schemes include: Feed-in-tariff (FIT) scheme: Under this scheme, renewable energy producers in Romania, including solar energy producers, are guaranteed a fixed price for their electricity for 15 years. The FIT rates for solar energy are revised every year, and they depend on the type and size of the solar project.

Is Romania ready for a large-scale solar project?

Romania has set ambitious targets for developing renewable energy sources, including solar power. This article provides a comprehensive overview of the current state of large-scale PV projects in Romania, covering project details, readiness levels, key players, and the overall impact on the energy sector and the environment.

How much solar energy does Romania need?

In the context of the European ambitions, Romania would need to aim for 44.4% RES, meaning 11.1 GW of solar - 6.1 GW for utility-scale and 5 GW for

rooftop PV1. Drivers for solar growth The last two years have been marked by significant legislative changes that underpinned the development of the Romanian PV sector.

Where can solar energy be developed in Romania?

Arad (5.40 GW) and Dolj (5.39 GW) are the most promising locations, but counties such as Giurgiu (4), Bihor (3.8), Teleorman (2.6), Timis (2.3) and Dambovita (2.3) also stand out in this respect. This geographical diversity highlights the potential for solar energy development across Romania.
