Overview

Can solar power be used at home?

To bridge that gap, an inverter converts DC into AC so your solar power is usable at home. Storage comes next. Batteries allow homeowners to store excess energy for use at night or during outages or simply when there is intermittent sunshine, and can be sized based on current and future consumption.

How long does a solar system last?

Payback period is simply the system cost divided by annual savings. Using the numbers above: $$12,000 \div $2,000 = 6$ years. That means in six years your system has paid for itself. Since panels typically last 25 years or more, the next 19 years are essentially free electricity.

How much does solar cost a year?

If solar cuts \$150 off your monthly bill, that's \$1,800 a year. Add another \$200 in credits for power you export, and your annual savings is \$2,000. Payback period is simply the system cost divided by annual savings. Using the numbers above: $$12,000 \div $2,000 = 6$ years. That means in six years your system has paid for itself.

How much does solar cost per kilowatt-hour?

The best way to measure such costs is called the levelized cost of electricity, which is essentially the lifetime cost per unit of electricity generated. The global weighted average LCOE stabilized at \$0.043 per kilowatt-hour for utility-scale solar PV. This made solar 41% cheaper than the least-cost fossil fuel option.

Is rooftop solar cost-competitive?

However, according to a 2025 McKinsey article, rooftop solar remains costcompetitive in many markets, with the lifetime cost of electricity generated

often cheaper than grid power.
