

# Uzbekistan cold box equipment energy storage box manufacturer

#### **Overview**

#### What is a cold box?

Cold boxes are self-supporting structures that protect cryogenic equipment such as brazed plate-fin heat exchangers, core-in-drums, distillation columns, piping, valves and instrumentation. Our cold boxes' steel casing acts as an envelope that offers easy installation of plate-fin heat exchangers and other equipment.

How do cold boxes work?

They are fitted with a nitrogen purge system and contain stainless steel beams that support the enclosed equipment. Because our cold boxes are transported horizontally but operate in a vertical position, we also include temporary support material to protect the cryogenic equipment during transportation and throughout set-up.

How do fives cold boxes protect cryogenic equipment?

Fives' cold boxes with integrated brazed heat exchangers protect cryogenic equipment in gas and petrochemical processing plants.
