

# What kind of battery is inside the outdoor power supply

#### **Overview**

What type of battery does a portable power station use?

Portable power stations use different types of batteries, including lithium-ion, lead-acid, and nickel-metal hydride. Each type of battery has its own advantages and disadvantages, so it's important to choose the right one for your needs.

How many outlets does a portable power station have?

The number and types of outlets and ports on a portable power station will determine how many and what types of devices you can power. Most portable power stations have at least one AC outlet, which can be used to power appliances that require standard household electricity.

How long does a portable power station last?

A portable power station's lifespan depends on the type of battery inside. Most new portable power stations, including all the models we recommend here, feature LiFePO4 battery technology, which lasts far longer than older lithiumion technology. How much more?

LiFePo4 power stations will last for more than 3,000 charge cycles, or about 10 years.

Do you need a portable power station?

However, if you need to power a refrigerator, a television, and several other appliances, you may need a portable power station with thousands of watts of power. The number and types of outlets and ports on a portable power station will determine how many and what types of devices you can power.

What is a portable power station?

A portable power station consists of a battery, a power inverter, and a set of outlets or ports for connecting electronic devices. The battery stores electrical

energy, which is then converted by the power inverter into the type of electricity needed by your devices (e.g. AC or DC power).

How do I choose a portable power station?

Consider the size and weight of the portable power station, as well as the size and weight of the battery and any accessories you may need, such as a carrying case or solar panels. Portable power stations use different types of batteries, including lithium-ion, lead-acid, and nickel-metal hydride.
